## **FOREWORD**

This bulletin reports the findings of a survey of all primary wood-using mills in Kansas in 2003 and details the industry's size and composition, its use of roundwood, and its generation and disposition of wood residues. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, forest industry development, and forest research.

Special thanks are given to primary wood-using firms that responded to the survey and to the Kansas Forest Service, Kansas State University, for canvassing the respondents. Their cooperation is greatly appreciated.

All volumes are reported in product-specific standard units and/or cubic feet. Volumes reported by mills in nonstandard units were converted to standard units using regional conversion factors. Reported trends and changes in the primary wood-using industry in Kansas are based on comparisons with previous surveys of the State's primary wood-using industry conducted in 1980, 1993, and 1998. Row and column data of tables may not sum due to rounding, but data in each table cell are accurately displayed.

# Kansas Timber Industry—An Assessment of Timber Product Output and Use, 2003

William H. Reading, IV and David L. Bruton

## HIGHLIGHTS

### Primary Wood-Using Industry

- The number of mills processing more than 1 million board feet per year decreased from five in 1998 to three in 2003 (table 1).
- The volume of industrial roundwood received by mills in Kansas in 2003 was 2,594 thousand cubic feet—a 16-percent reduction from 1998 (table 2).
- While overall roundwood receipts fell from 1998 levels, receipts by mills classified as small (less than 100 thousand board feet (MBF)/year) increased from 1998 levels (fig. 1).
- Kansas forest lands provided 97 percent of the roundwood received by the State's mills in 2003, up from 86 percent in 1998. This increase is mainly due to a drop in roundwood imported from Missouri.
- Most saw logs used by Kansas mills were grown in Kansas. The remaining saw logs were from Missouri and Oklahoma (fig. 2).

### About the Authors:

**William H. Reading, IV**, Forester, received a B.S. in forest management from Northern Arizona University in 1988 and an M.S. in forestry/forest mensuration in 1992 from the same institution. He worked as a consultant forester from 1992 to September 2000, when he joined the USDA Forest Service. He has worked for the Forest Inventory and Analysis unit at the North Central Research Station since then.

**David L. Bruton**, Utilization and Marketing Forester, Kansas Forest Service, received a B.S. in forest management from the University of Missouri-Columbia in 1988. He joined the Kansas Forest Service in 1992.

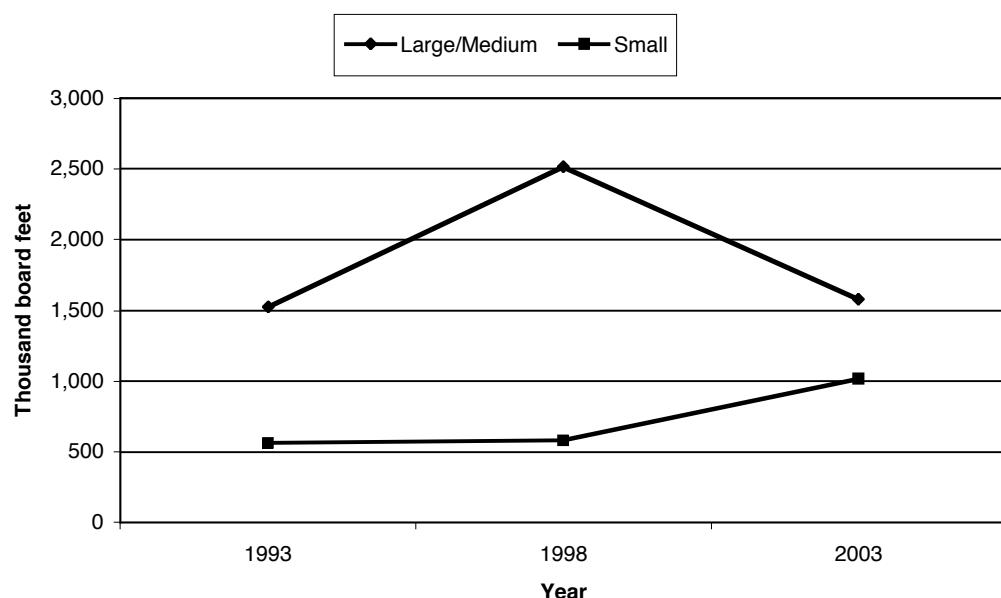

Figure 1.—Saw log receipts by mill size class and survey year, Kansas, 1993, 1998, 2003.

■ 1998 ■ 2003

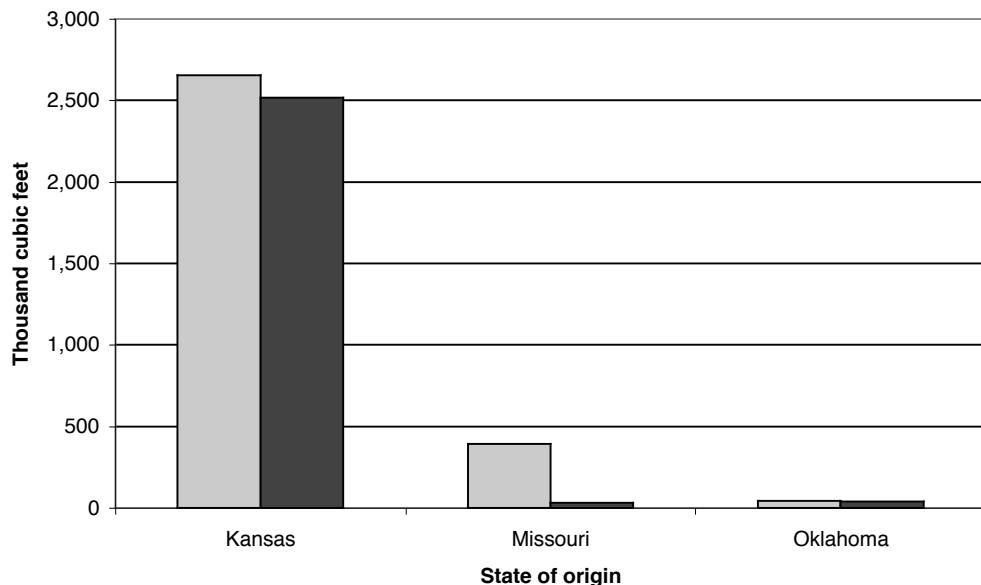

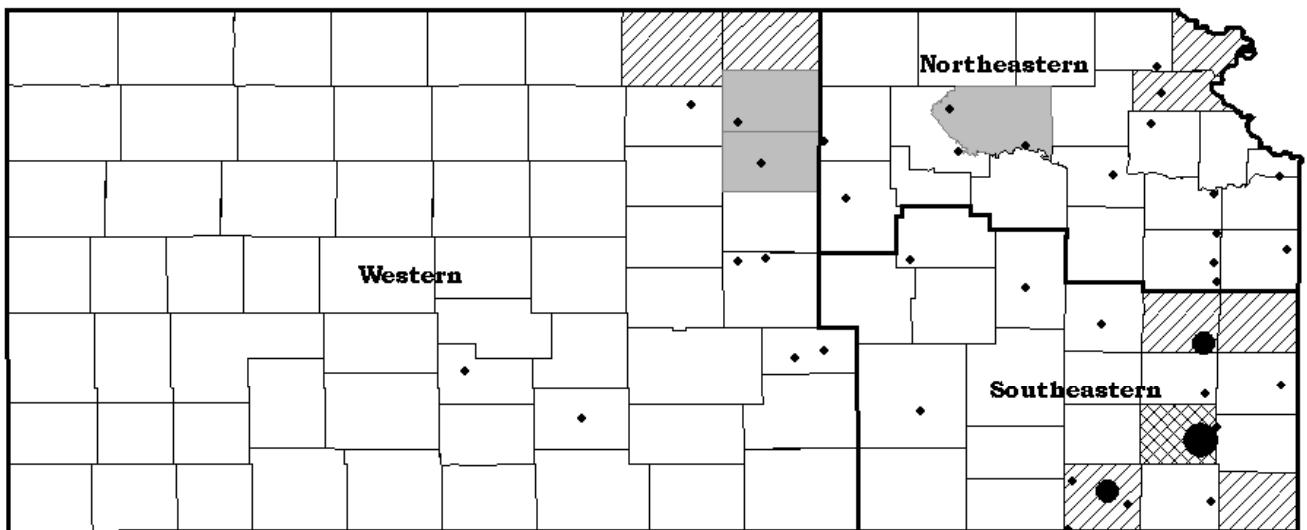

Figure 2.—Saw log receipts by State of origin and by survey year, Kansas, 1998 and 2003.

- The Northeastern and Southeastern Forest Survey Units contain most of the primary mills in the State (fig. 3).
- The proportion of roundwood going to mills in the three Forest Survey Units changed significantly between the 1998 and 2003 surveys (fig. 4). Receipts by mills in the Northeastern Unit fell by 45 percent, Southeastern Unit receipts fell by 12 percent, and Western Unit receipts increased by 169 percent. During the same period, the net loss of one large and one medium mill occurred.

### Industrial Roundwood Production

- In 2003, industrial roundwood production was 3,287 thousand cubic feet—an increase of 1 percent over 1998 (table 3).
- Saw log production, by far the largest component of production, increased by 2 percent between 1998 and 2003—from 19,819 MBF to 20,186 MBF (table 5). With the net volume of sawtimber on Kansas timberland currently estimated to be 5,287,676 MBF (Moser *et al.* 2006), this equates to an annual removal of just 0.38 percent.
- Most of the roundwood production from Kansas forests was used by Kansas mills (77 percent) with the remainder going to Missouri (12 percent), Nebraska (10 percent), and other mills outside of the Northern Region of the Forest Service (2 percent) (fig. 5). Exports of saw logs to other States increased by 31 percent from 1998 to 2003.
- The Southeastern Forest Survey Unit continues to produce the majority of the saw logs harvested in Kansas. The Southeastern Unit produced 58 percent of production followed by the Northeastern Unit (24 percent) and the Western Unit (18 percent) (fig. 6). Based on current forest inventory data, the current sawtimber production levels are not well correlated with sawtimber inventory figures at the Survey Unit level. The Northeastern Unit contains 44 percent of the standing sawtimber, the Southeastern Unit contains 37 percent, and the Western Unit contains 19 percent (fig. 7).

#### Legend

##### Primary Mill Locations

##### Annual Mill Receipts

- ◆ Less than 100 MBF/year
- 100 - 1,000 MBF/year
- More than 1,000 MBF/year

##### County Roundwood Production

##### Production Volume

- |                          |
|--------------------------|
| Less than 500 MBF/year   |
| 500 - 1,000 MBF/year     |
| 1,001 - 5,000 MBF/year   |
| More than 5,000 MBF/year |

Annual mill receipts is volume of roundwood received by mill, in MBF (thousand board feet) 1/4-inch International scale, for year 2003. Source of roundwood can be both in-state and out-of-state.

Production volume is volume of roundwood harvested, in MBF 1/4-inch International scale, from individual county for year 2003. Destination of roundwood can be both in-state and out-of-state.

Figure 3.—Active sawmill location, receipts, and county production volumes, Kansas, 2003.

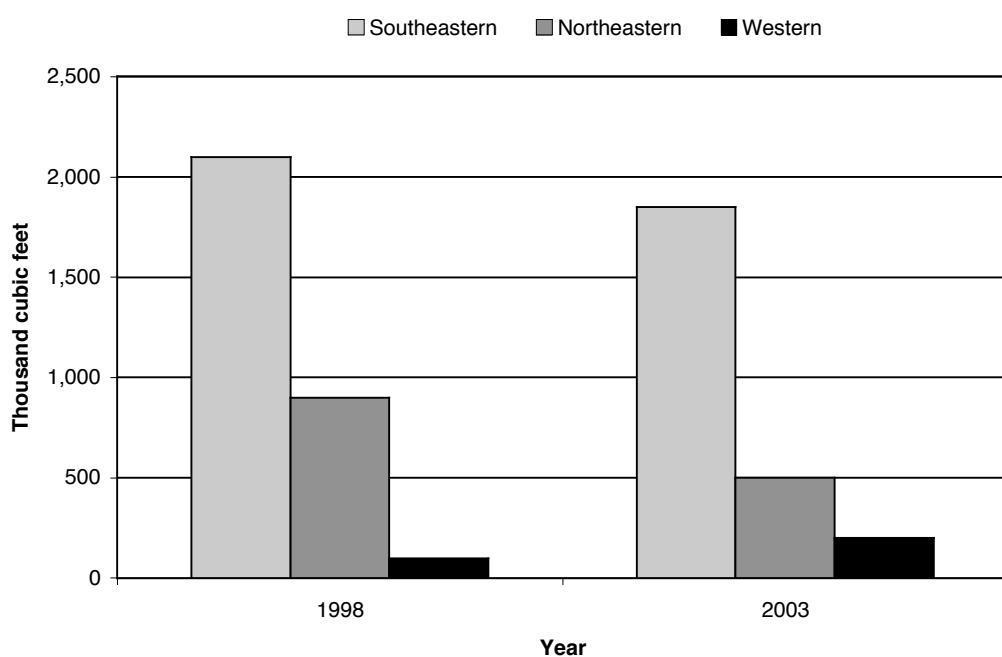

Figure 4.—Mill receipts by Forest Survey Unit and year, Kansas, 1998 and 2003.

Figure 5.— Kansas saw log production by State of destination and year, Kansas, 1998 and 2003.

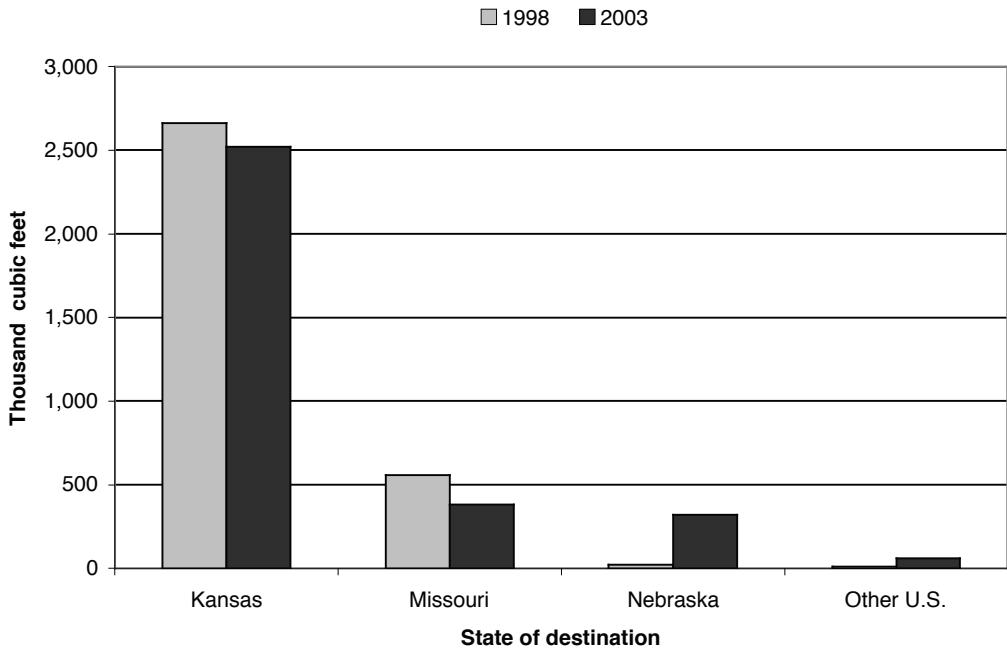

Figure 6.—Saw log production by Forest Survey Unit, Kansas, 2003.

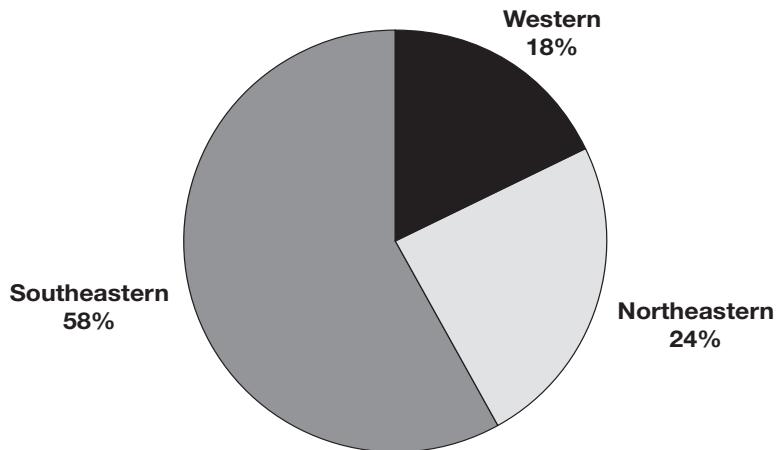

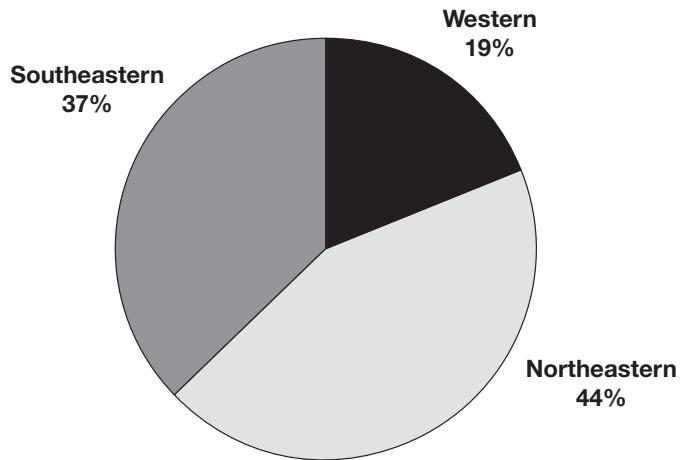

Figure 7.—Percent of State sawtimber inventory volume by Forest Survey Unit, Kansas, 2004.

- In 2003, 0.21 percent of the standing sawtimber was harvested in the Northeastern Unit, 0.60 percent was harvested in the Southeastern Unit, and 0.35 percent was harvested in the Western Unit.
- The distribution of saw log production by species/species group changed from 1998 to 2003 (fig. 8). Notably, ash increased from 4 percent to 9 percent, black walnut increased from 7 percent to 14 percent, hackberry decreased from 9 percent to 4 percent, and white oak decreased from 23 percent to 18 percent.

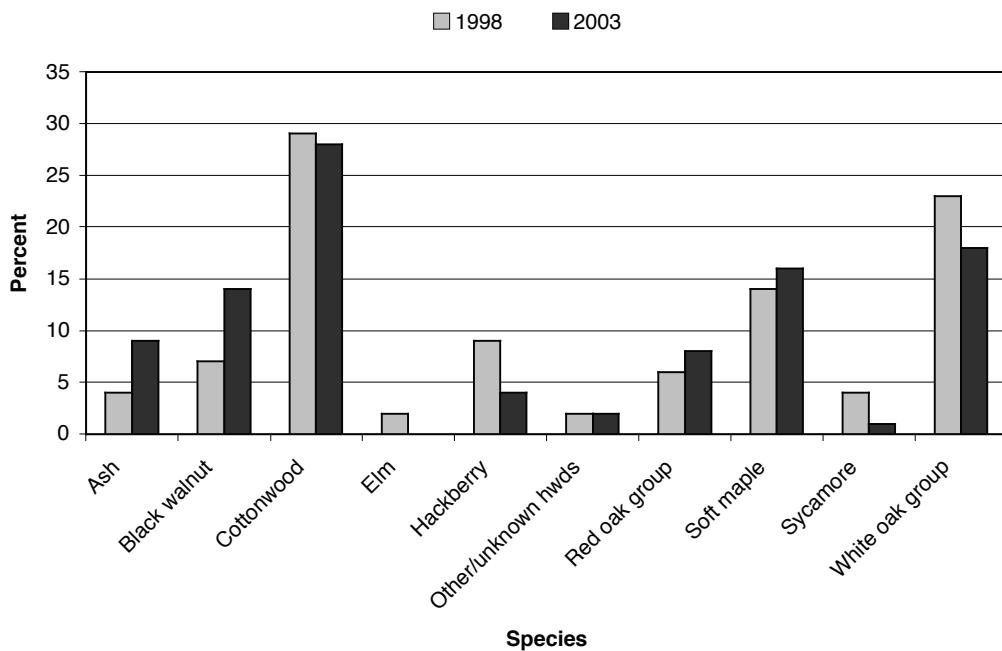

Figure 8.—Percent of saw log production by species/species group, Kansas, 1998 and 2003.

## Primary Mill Residues

- The percentage of mill residues that were not used increased from 18 percent in 1998 to 29 percent in 2003 (fig. 9). Residues classified as being used for miscellaneous uses dropped from 56 percent in 1998 to 37 percent in 2003. The portion of mill residues used for fiber products rose from 16 percent in 1998 to 24 percent in 2003. The portion of mill residues used for other purposes was relatively unchanged between 1998 and 2003.

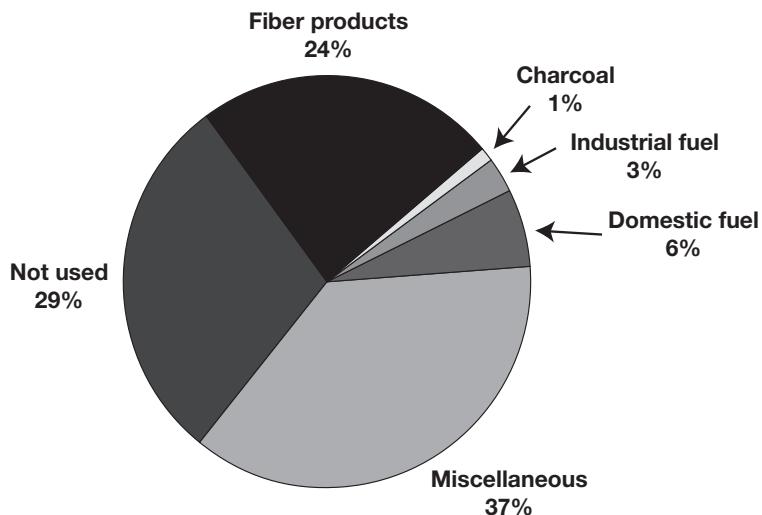

Figure 9.—Percent distribution of mill residue end use, Kansas, 2003.

- Residue disposition is far from homogeneous across the three Forest Survey Units (fig. 10). The differences probably reflect regional markets for residues as well as the size distribution of mills across Kansas.

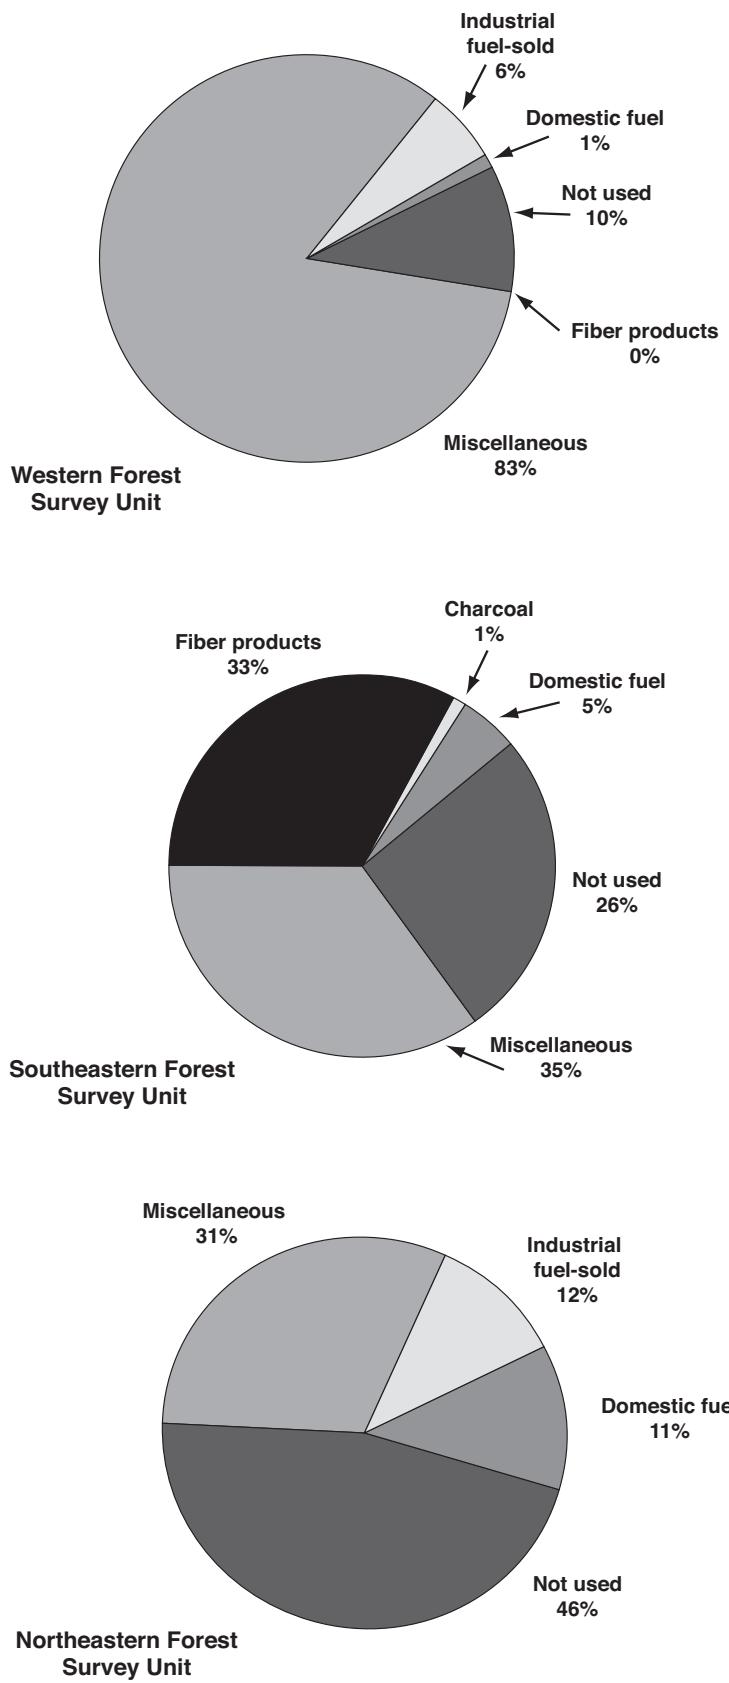

Figure 10.—*Percent distribution of mill residue end use by Forest Survey Unit, Kansas, 2003.*

## **APPENDIX**

### **STUDY METHODS**

This study was a cooperative effort of the Kansas Forest Service (KFS) and the North Central Research Station (NCRS) of the USDA Forest Service. KFS used mail questionnaires supplied by NCRS that were designed to determine the size and composition of the State's primary wood-using mills, and followed up with additional mailings, telephone, and personal contacts until a 100-percent response was achieved. Completed questionnaires were sent to NCRS for editing and processing.

As part of data editing and processing, all industrial roundwood volumes reported on the questionnaires were converted to standard units of measure using regional conversion factors. Timber removals by source of material and harvest residues generated during logging were estimated from standard product volumes using factors developed from logging utilization studies previously conducted by NCRS. Finalized data on the State's industrial roundwood receipts were loaded into a regional timber removals database where they were supplemented with data on out-of-State uses of Kansas roundwood to provide a complete assessment of the State's timber product output.

### **DEFINITION OF TERMS**

**Board foot**—Unit of measure applied to roundwood. It relates to lumber that is 1 foot long, 1 foot wide, and 1 inch thick (or its volume equivalent).

**Central stem**—The portion of a tree between a 1-foot stump and the minimum 4.0-inch top diameter outside bark or the point where the central stem breaks into limbs, all of which are less than 4.0 inches diameter outside bark.

**Coarse mill residue**—Wood residue suitable for chipping such as slabs, edgings, and veneer cores.

**Commercial species**—Tree species presently or prospectively suitable for industrial wood products. (Note: Excludes species of typically small size, poor form, or inferior quality such as hophornbeam, Osage-orange, and redbud.)

**Cull removals**—Net volume of rough and rotten trees, plus the net volume in sections of the central stem of growing-stock trees that do not meet regional merchantability standards, harvested for industrial roundwood products.

**Dead removals**—Net volume of dead trees harvested for industrial roundwood products.

**Diameter at breast height (d.b.h.)**—The diameter outside bark at 4.5 feet above the forest floor on the uphill side of the tree. For determining breast height, the forest floor includes the duff layer that may be present, but does not include unincorporated woody debris that may rise above the ground line.

**Doyle scale**—Log rule based on a mathematical formula of log diameter and length. Doyle scale tends to underscale small diameter logs and overscale large diameter logs.

**Fine mill residue**—Wood residue not suitable for chipping such as sawdust and veneer clippings.

**Forest land**—Land at least 10 percent stocked by forest trees of any size, or formerly having had such tree cover, and not currently developed for nonforest use. (Note: Stocking is measured by comparing specified standards with basal area and/or number of trees, age or size, and spacing.) The minimum area for classification of forest land is 1 acre. Roadside, streamside, and shelterbelt strips of timber must have a crown width of at least 120 feet to qualify as forest land. Unimproved roads and trails or clearings in forest areas shall be classed as forest if less than 120 feet wide. Streams and other bodies of water shall be classed as forest if less than 30 feet wide.

**Growing-stock removals**—The volume of growing stock removed from the timberland inventory by harvesting industrial roundwood products. (Note: Includes sawtimber removals, poletimber removals, and logging residues.)

**Growing-stock tree**—A live timberland tree of commercial species that contains at least one 12-foot saw log or two saw logs 8 feet or longer meeting minimum log/tree grade requirements, now or prospectively, and meeting specified standards of size, quality, and merchantability. At least one-third of the gross board-foot volume must be merchantable material and at least 50 percent sound at any point. (Note: Excludes rough, rotten, and dead trees.)

**Growing-stock volume**—Net volume of growing-stock trees 5.0 inches d.b.h. and over, from 1 foot above the ground to a minimum 4.0-inch top diameter outside bark of the central stem or to the point where the central stem breaks into limbs.

**Hardwoods**—Dicotyledonous trees, usually broad-leaved and deciduous.

**Harvest residues**—The total net volume of unused portions of trees cut or killed by logging. (Note: Includes both logging residues and logging slash.)

**Industrial roundwood production**—The quantity of industrial roundwood harvested in a geographic area.

**Industrial roundwood products**—Saw logs, pulpwood, veneer logs, poles, commercial posts, pilings, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for fuel, pulp, or board products.

**Industrial roundwood receipts**—The quantity of industrial roundwood received by commercial mills in a geographic area.

**International 1/4-inch scale**—A log rule or formula for estimating the board-foot volume of logs, allowing one-half inch of taper for each 4-foot length. The rule appears in a number of forms that allow for kerf. In this form, one-fourth inch of kerf is assumed. This rule is used as the USDA Forest Service standard log rule in the Eastern United States.

**Limbwood removals**—Net volume of all portions of a tree other than the central stem (including forks, large limbs, tops, and stumps) harvested for industrial roundwood products.

**Logging residue**—Net volume of unused portions of the merchantable central stem of growing-stock trees cut or killed by logging.

**Logging slash**—Net volume of unused portions of the unmerchantable (non-growing-stock) sections of trees cut or killed by logging.

**Merchantable sections**—Sections of the central stem of growing-stock trees that meet either pulpwood or saw log specifications.

**Net volume**—Gross volume less deductions for rot, sweep, or other defects affecting use for roundwood products.

**Noncommercial species**—Tree species of typically small size, poor form, or inferior quality that normally do not develop into trees suitable for industrial roundwood products.

**Nonforest land**—Land that has never supported forests, and land formerly forested where use for timber management is precluded by development for other uses. (Note: Includes areas used for crops, improved pasture, residential areas, city parks, improved roads of any width and adjoining clearings, powerline clearings of any width, and 1- to 39.9-acre areas of water classified by the Bureau of the Census as land. If intermingled in forest areas, improved roads and nonforest strips must be more than 120 feet wide and more than 1 acre to qualify as non-forest land.)

**Nonforest land removals**—Net volume of trees on nonforest lands harvested for industrial roundwood products.

**Poletimber**—A growing-stock tree at least 5.0 inches d.b.h. but smaller than sawtimber size (9.0 inches d.b.h. for softwoods, 11.0 inches d.b.h. for hardwoods).

**Poletimber removals**—Net volume in the merchantable central stem of poletimber trees harvested for industrial roundwood products.

**Primary wood-using mills**—Mills receiving roundwood or chips from roundwood for processing into products.

**Primary wood-using mill residue**—Wood materials (coarse and fine) and bark generated at manufacturing plants from roundwood processed into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some byproduct.

**Rotten tree**—A tree that does not meet regional merchantability standards because of excessive unsound cull.

**Rough tree**—A tree that does not meet regional merchantability standards because of excessive sound cull. Includes noncommercial tree species.

**Roundwood**—Logs, bolts, or other round sections cut from trees (including chips from roundwood).

**Sapling**—A live tree between 1.0 and 5.0 inches d.b.h.

**Sapling removals**—Net volume in saplings harvested for industrial roundwood products.

**Saw log**—A log meeting minimum standards of diameter, length, and defect, sound and straight, and with a minimum diameter outside bark of 7.0 inches for softwoods and 9.0 inches for hardwoods, or other combinations of size and defect specified by regional standards.

**Saw log portion**—That portion of the central stem of sawtimber trees between the stump and the saw log top.

**Saw log top**—The point on the central stem of sawtimber trees above which a saw log cannot be produced. The minimum saw log top is 7.0 inches d.o.b. for softwoods and 9.0 inches d.o.b. for hardwoods.

**Sawtimber tree**—A growing-stock tree containing at least a 12-foot saw log or two noncontiguous saw logs 8 feet or longer, and meeting regional specifications for freedom from defect. Softwoods must be at least 9.0 inches d.b.h. and hardwoods must be at least 11.0 inches d.b.h.

**Softwoods**—Coniferous trees, usually evergreen, having needles or scale-like leaves.

**Timberland**—Forest land that is producing, or is capable of producing, in excess of 20 cubic feet per acre per year of industrial roundwood products under natural conditions, is not withdrawn from timber utilization by statute or administrative regulation, and is not associated with urban or rural development.

**Timber product output**—The volume of roundwood products produced from an area's forests.

**Timber removals**—The total net volume of trees removed for industrial roundwood products or left on the ground as harvest residues.

**Tree**—A woody plant usually having one or more perennial stems, a more or less definitely formed crown of foliage, and a height of at least 12 feet at maturity.

**Upper stem portion**—That portion of the central stem of sawtimber trees between the saw log top and the minimum top diameter of 4.0 inches outside bark or to the point where the central stem breaks into limbs.

**Veneer log**—Logs to be used in the production of plywood, finished panels, or veneer sheets, both rotary cut and sliced.

## TREE SPECIES GROUPS IN KANSAS

(Moser, 2006)

Note: Many additional tree species have been planted around homes, farm buildings, and in towns and cities. However, only those species encountered during the 2004 inventory of the forest resources of Kansas are listed here.

### Softwoods

#### Pines

Eastern white pine	<i>Pinus strobus</i>
Ponderosa pine	<i>Pinus ponderosa</i>
Red pine	<i>Pinus resinosa</i>
Shortleaf pine	<i>Pinus echinata</i>
Eastern redcedar	<i>Juniperus virginiana</i>

### Hardwoods

#### Ashes

White ash	<i>Fraxinus americana</i>
Green ash	<i>Fraxinus pennsylvanica</i>
Blue ash	<i>Fraxinus quadrangulata</i>

#### Elm

American elm	<i>Ulmus americana</i>
Siberian elm	<i>Ulmus pumila</i>
Slippery elm	<i>Ulmus rubra</i>
Rock elm	<i>Ulmus thomasii</i>

#### Hickories

Pecan	<i>Carya illinoensis</i>
Shellbark hickory	<i>Carya laciniosa</i>
Shagbark hickory	<i>Carya ovata</i>
Mockernut hickory	<i>Carya tomentosa</i>
Bitternut hickory	<i>Carya cordiformis</i>
Black hickory	<i>Carya texana</i>

Maple	
Silver maple	<i>Acer saccharinum</i>
Sugar maple	<i>Acer saccharum</i>
Red maple	<i>Acer rubrum</i>
Oaks, red	
Northern red oak	<i>Quercus rubra</i>
Shumard oak	<i>Quercus shumardii</i>
Blackjack oak	<i>Quercus marilandica</i>
Shingle oak	<i>Quercus imbricaria</i>
Black oak	<i>Quercus velutina</i>
Pin oak	<i>Quercus palustris</i>
Oaks, white	
White oak	<i>Quercus alba</i>
Bur oak	<i>Quercus macrocarpa</i>
Chinkapin oak	<i>Quercus muehlenbergii</i>
Post oak	<i>Quercus stellata</i>
Overcup oak	<i>Quercus lyrata</i>
Other hardwoods	
Basswood, American	<i>Tilia americana</i>
Birch, river	<i>Betula nigra</i>
Boxelder	<i>Acer negundo</i>
Buckeye	<i>Aesculus spp.</i>
Catalpa, northern	<i>Catalpa speciosa</i>
Cherry, black	<i>Prunus serotina</i>
Cottonwood, eastern	<i>Populus deltoides</i>
Hackberry	<i>Celtis occidentalis</i>
Honeylocust	<i>Gleditsia triacanthos</i>
Kentucky coffeetree	<i>Gymnocladus dioicus</i>
Locust, black	<i>Robinia pseudoacacia</i>
Mulberry, white	<i>Morus alba</i>
Mulberry, red	<i>Morus rubra</i>
Persimmon	<i>Diospyros virginiana</i>
Sassafras	<i>Sassafras albidum</i>
Sugarberry	<i>Celtis laevigata</i>
Sycamore	<i>Platanus occidentalis</i>
Walnut, black	<i>Juglans nigra</i>
Willow, black	<i>Salix nigra</i>
Willow, white	<i>Salix alba</i>
Noncommercial species	
Ailanthus	<i>Ailanthus altissima</i>
Apple	<i>Malus spp.</i>
Catalpa, southern	<i>Catalpa bignonioides</i>
Chittamwood	<i>Rhamnus purshiana</i>
Hawthorn	<i>Crataegus spp.</i>
Hophornbeam, eastern	<i>Ostrya virginiana</i>
Osage-orange	<i>Maclura pomifera</i>
Redbud, eastern	<i>Cercis canadensis</i>
Russian-olive	<i>Elaeagnus angustifolia</i>
Soapberry	<i>Saponaria</i>
Wild plum	<i>Prunus spp.</i>
Willow, peachleaf	<i>Salix amygdaloidea</i>

## **TABLES**

Table 1.-- Number of active primary wood-using mills in Kansas, 1993, 1998, 2003

Kind of mill		1993	1998	2003
Sawmills	Large	1	1	1
Sawmills	Medium	2	2	2
Sawmills	Small	3	32	34
Total		35	39	40

1-- Annual lumber production more than 5 million board feet.

2-- Annual lumber production from 1 million to 5 million board feet.

3-- Annual lumber production less than 1 million board feet.

Pulp mills- Includes particle board plants, OSB, waferboard, etc.

Other mills- Includes post, pole, piling, cooperage, shavings, mine timber, commercial firewood vendors, etc.

Table 2-- Industrial roundwood receipts by type of mill in Kansas, 1993, 1998, 2003  
 (In thousand cubic feet)

	1993	1998	2003	Percent change from 1998
Softwood				
Saw mills	12.4	14.6	27.4	88%
Total:	12.4	14.6	27.4	88%
Hardwood				
Saw mills	2071.5	3079.3	2566.3	-17%
Total:	2071.5	3079.3	2566.3	-17%
All species				
Saw mills	2083.9	3093.9	2593.6	-16%
Total:	2083.9	3093.9	2593.6	-16%

Pulp mills: Includes particleboard plants: OSB, waferboard, etc.  
 Other mills: Does not include treating plants or fuelwood receipts.

Rows and columns may not sum due to rounding

Reading, William H., IV; Bruton, David L.

**2007. Kansas timber industry—an assessment of timber product output and use, 2003.** Resour. Bull. NC-269. St. Paul, MN: U.S.

Department of Agriculture, Forest Service, North Central Research Station. 72 p.

Discusses recent forest industry trends in Kansas; reports production and receipts of industrial roundwood by product, species, and county in 2003. Also reports on logging residue, on wood and bark residue generated at primary wood-using mills, and on disposition of mill residues.

**KEY WORDS:** Industrial roundwood, production residues, saw logs, veneer logs.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, SW, Washington, DC 20250-9410, or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

## **Mission Statement**

We believe the good life has its roots in clean air, sparkling water, rich soil, healthy economies and a diverse living landscape. Maintaining the good life for generations to come begins with everyday choices about natural resources. The North Central Research Station provides the knowledge and the tools to help people make informed choices. That's how the science we do enhances the quality of people's lives.
